

# Jianlin "Herman" Li

[jianlin.li@uwaterloo.ca](mailto:jianlin.li@uwaterloo.ca) | [jianlin-herman-li.github.io](https://github.com/jianlin-herman-li)

## Ph.D. in Computer Science

Google Scholar | [linkedin.com/in/jianlin-herman-li](https://www.linkedin.com/in/jianlin-herman-li)

specialized in **programming languages & compilers**

Waterloo, Ontario, Canada

## Objective

I am a **Ph.D.** student in the field of **programming languages**. I care about software safety and efficiency across the entire life cycle: from design (**model checking**), to implementation (**program analysis**, **formal verification** via automatic and **interactive theorem proving**), to compilation (**optimization**, **compiler correctness**). During my Ph.D., I design **probabilistic programming languages (PPLs)** and implement **compilers** for sound and scalable Bayesian inference. My academic work applies **type systems**, **program analyses**, and **logical relations** to achieve efficient, reliable, and certified probabilistic programming.

## Education (Anticipated graduation date: 04/26)

University of Waterloo, Ph.D. in Computer Science

Sep 2021 – Expected April 2026

Supervisors: Yizhou Zhang, Ondřej Lhoták

Cumulative GPA: 98.33/100

Institute of Software, Chinese Academy of Sciences, M.Sc. in Computer Science

Sep 2018 – Aug 2021

Nanjing University of Aeronautics and Astronautics, B.Sc. in Computer Science

Sep 2013 – Jun 2018

## Experience

Research Assistant, University of Waterloo

Sep 2021 – Present

- **GENI (PLDI 2025)**: A compiler implemented in **Rust** that compiles functional programming-style probabilistic programs into generating functions, a compact and exact compilation target representing measures.
- **MAPPL(PLDI 2024)**: A compiler implemented in **OCaml** that enables scalable inference by factorizing recursive probabilistic programs via **information-flow typing** (with a denotational, **logical-relations** model).
- **FIDELIO(POPL 2023)**: A compiler embodies symbolic methods, e.g., a type system and program analysis, that aid neural-network-based inference (**Pyro PPL**, **PyTorch**, **LSTM**, **Deep Amortized Inference**, **OCaml**).
- Implement maximum entropy reinforcement learning via variational inference in **Pyro**, a universal probabilistic programming language (PPL) written in Python and supported by **PyTorch** on the backend.

Teaching Assistant(taught tutorials, held office hours, etc.), University of Waterloo

Sep 2021 – Present

- Computer Architecture, Compiler Construction, Logic and Computation, Foundations of Sequential Programs.

Research Assistant & Exchange Student, Saarland University (Saarbrücken, Germany)

Sep 2019 – Aug 2020

- Worked on automated safety verification of programs invoking neural networks (published at **CAV 2021**):
  - Trained a heterogeneous controller combining neural networks and handcrafted components (C programs) via reinforcement learning in an **OpenAI** Minigrid-style environment, enabling autonomous decision-making.
  - Integrated **CLAM**, a state-of-the-art **LLVM** bitcode static analyzer, with **DEEPSYMBOL**(my neural network verifier), enabling a precise neuro-aware verification pipeline (impossible to verify without our approach).
- Generalized Minsky machine halting problem  $\preceq_m$  2 counter machine halting problem in **Coq**.

Research Assistant, Institute of Software, Chinese Academy of Sciences

Sep 2018 – Aug 2021

- Developed **DEEPSYMBOL**, a verification tool for the robustness of deep neural networks (DNNs).
  - Propose a novel **symbolic propagation** method improving **abstract interpretation** for DNN analysis.
  - Fixed a severe memory leak in the Zonotope domain of the **APRON** numerical abstract domain library that prevented scaling, caused by an ABI mismatch leading to memory layout and calling convention errors.
  - Bring benefits of up to **549%** speedup (9.16h  $\rightarrow$  1.41h) to a state-of-the-art **SMT**-based **verifier**.

## Technologies

**Languages/Frameworks**: Rust, OCaml, C++ , LLVM, PyTorch, JAX, Coq, Lean, Agda.

**Skills**: Compiler Construction, Formal Methods, Program Verification, Program Analysis.

## Publications (Programming Languages/Compilers)

## Awards

---

- 2023: David R. Cheriton Graduate Scholarship
- 2021: University of Waterloo Entrance Scholarship
- 2020: China National Scholarship (Top 0.2%)
- 2020/2019: Institute of Software, CAS First-Class Academic Scholarships (Top 10%)
- 2015: Silver Medal, ACM-ICPC Shanghai Metropolitan Programming Contest
- 2014: Silver Medal, ACM-ICPC Asia Regional Contest, Anshan Site
- 2014: China National Scholarship (Top 0.2%)
- 2014: Winning Prize, RoboCup China Open Soccer Simulation 2D

## Services
